EXPERTISE

Full Stack Development

- React, TypeScript
- Django, Node.js
- MySQL, Redis

DevOps Engineering

- Docker, Kubernetes
- Helm, Harbor, Nginx
- GitHub Actions, CI/CD

AI & Data Engineering

- AI Agent, Tool Use
- N8N, Dify
- Kafka, KubeFlow

PERSONALITY

Detail-oriented:

Focused on robustness and comprehensiveness when architecting system orchestration and scheduling workflows.

Self-motivated:

Passionate about deep-diving into complex technical bottlenecks with long-term research capability.

HONORS

Study Abroad Dream Program

SparkAmplify Winter Internship (2026)

Space New Star Program

Industrial Development Admin, MOEA (2024)

HUANG, YAO-CHING (Kim)

Master's Student / Full Stack & AI Engineer

ABOUT MYSELF

Experienced in full-stack development, DevOps deployment, and AI Agent development. Explored RL to enhance SSD performance, integrated Dify with N8N for automated workflows, and operated Kubernetes clusters for 6G platform. Skilled in containerized deployment, CI/CD pipelines, and cross-platform system integration. Self-motivated and dedicated to applying academic knowledge to practical development.

EXPERIENCE

SparkAmplify — Winter Intern (US) Work

Built frontend-backend separated deployment with Docker containerization, Nginx reverse proxy, and Harbor private Image Registry. Established and maintained Git Workflow (branching strategy, PR review) and CI/CD pipeline with GitHub Actions. Authored platform architecture docs, K8s/Docker deployment diagrams, and Use Case flow charts.

6G AI/ML Platform — O-RAN x KubeFlow x Agent AI Project

Contributed to NSTC 6G AI/ML platform development. Operated 20+ container services across dual-node hybrid deployment (Agent Node + Inference Node) spanning Docker and Kubernetes. Integrated intent-driven platform with AI Agent to control the system. Demonstrated AR/VR QoS inference at EuCNC 2024 (Belgium) and presented at COSCUP 2024.

MySphere — English Story Learning Platform Project

Developed via Study Abroad Program with SparkAmplify (LA) and Tung Hua Book Co. Built learning progress tracking API and LLM-powered Q&A Chat; managed database and API development. Set up Docker + Nginx deployment, Harbor image management, and GitHub Actions CI/CD, standardizing team Git Workflow.

Calculus Teaching Assistant — NTUST Work

Assisted in teaching, grading assignments, and answering student questions. Independently built a grade registration & exam management system (React + Django + DB) to streamline course administration. Developed auto-exam AI Agent with Tool Use, embedding Word tool to autonomously generate exam documents.

IT Consultant — Ying-Na Industrial Co. Part-time

Managed regular database backups and maintenance to ensure data security. Served as internal IT consultant for troubleshooting computer and system issues.

EDUCATION

National Taiwan University of Science and Technology (NTUST)

M.S. in Electronic Engineering

Sep 2025 - Present

National Taiwan University of Science and Technology (NTUST)

B.S. in Electronic Engineering

Sep 2021 - Jun 2025

• GPA: 89.73 / 100 | Class Rank: 5/37 (Top 13.5%) | Dept. Rank: 13/109 (Top 11.9%)

RESEARCH & THESIS

Improving SSD GC Long Tail Latency Using Idle Time B.S. Thesis

Applied Deep Q-Learning for RL-based GC scheduling; validated with 100K SNIA IOTTA traces on MQSim. Bridged Python/C++ via Cython; effectively reduced long tail latency occurrence.

O-RAN SC Dual-Layer Architecture Deployment Research

Deployed SMO/OAM layer (3 Docker Compose Stacks) and NonRT RIC layer (13 Helm subcharts on K8s). Implemented Docker x Kubernetes cross-platform network integration.
